

## **PROBLEM STATEMENT**

### **IOT BASED SMART SOLUTIONS FOR RAILWAYS**

Majority of the railways runs on the conventional method like we need to buy a ticket in a long queue, due to usage of ticket we are forced to use huge amount of paper which comes from the forest trees and recycled paper, but the majority comes from the forest (Deforestation of forest), we also need a new modern solution for this problems and we also need a accurate model to execute all the process, we need fully automation to this process.

In some instances rails can earlier or later, so due to this customer suffers a lot, they may not reach their destination in correct time, so we need a efficient way of solution which can solve all mentioned problem above.
